BEST VIRAL AI ANIMATION PROMPT PACK

Step-by-Step Guide to Creating Viral Instagram Reels

In this guide, you'll learn the exact workflow I use to create AI animation videos that are designed to grab attention, trigger emotion, and help grow an Instagram account fast. You can follow this process using Google Flow (Veo), Wan 2, or any AI video generator that supports text-to-video prompts.

My Workflow

I personally use Google Flow because it gives 50 free credits every day, allowing me to generate multiple high-quality video clips at no cost.

Since most AI video generators create clips of around 8–10 seconds, I build each Instagram Reel by combining **two clips**. This gives me a final video of approximately 15–20 seconds, which is the perfect sweet spot for keeping viewers engaged and boosting the algorithm.

Step 1: Create Your Character Sheet

Before generating any animation, create a character sheet.

A character sheet is a reference image showing your character from different angles with the same clothing, hairstyle, colors, and proportions. This helps the AI keep your character consistent throughout the entire story.

Without a character sheet, your character may change appearance from one scene to the next.

You can create a character sheet by:

- Asking ChatGPT to generate a detailed character sheet prompt.
- Creating one with your preferred AI image generator.
- Using a character design you find on Pinterest as inspiration (don't copy copyrighted artwork).

Example: Below is one of my character sheets that I use as a reference for every scene.

VIDEO 1: The Standard Viral Workflow

This is the bread-and-butter workflow for a high-retention 20-second video.

Before generating the video:

-  **Set the video length** to 10 seconds per scene.
-  **Upload your character sheet** as the reference image.
-  **Use the highest quality** available (1080p or higher).

PROMPT – SCENE 1 (10 Seconds)

Use the uploaded male and female character reference sheets as the exact characters throughout the video. Keep their faces, hairstyles, body proportions, clothing, and expressions perfectly consistent. Create a warm Disney Pixar-style 3D animation inside a cozy modern apartment during golden hour. The exhausted wife arrives home after work carrying her handbag, opens the apartment door, and walks in slowly with tired body language. The husband notices her immediately and walks toward her with a caring smile. He gently kneels, removes her high heels, places soft fluffy slippers on her feet, guides her to the sofa, wraps a warm blanket around her shoulders, and hands her a hot cup of tea. She smiles softly and begins to relax. End the clip with the husband walking into the kitchen to start preparing a surprise dinner. Cinematic camera movements, expressive facial animation, soft lighting, emotional storytelling, Pixar-quality 3D animation.

Why this prompt works: This prompt tells the AI who the characters are, what actions happen, the animation style, the lighting, and the camera movement. It sets up a strong beginning so Scene 2 can continue naturally.

 **Pro Tip:** If the character changes appearance or clothing, regenerate the clip using the same character sheet and avoid changing the character description between scenes.

PROMPT – SCENE 2 (10 Seconds)

Continue seamlessly from the previous clip using exactly the same male and female characters and apartment. The husband finishes preparing a restaurant-quality dinner with beautiful food, dessert, fresh juice, flowers, and candles on a perfectly decorated dining table. He gently takes her hand and leads her to the table. She becomes overwhelmed with emotion, covers her mouth in surprise, smiles with happy tears, and he politely pulls out her chair before they sit together for a romantic candlelit dinner. End with a slow cinematic close-up of them smiling at each other across the table. Warm cozy lighting, Pixar-quality 3D animation, expressive emotions, smooth cinematic camera.

Why this prompt works: This prompt continues the action immediately from where Scene 1 left off. It brings the short story to a satisfying or surprising conclusion, which triggers saves, shares, and viral engagement.

VIDEO 2: The "Relatable Contrast" Framework

One of the fastest ways to go viral is by showing a highly relatable contrast. In this video, we create a hilarious "Expectation vs. Reality" style Reel: **The First Baby vs. The Second Baby.**

PROMPT – SCENE 1: The Panic (10 Seconds)

High-end Pixar-style 3D animation. Cinematic lighting, ultra-expressive facial acting, polished glossy materials, bold squash-and-stretch, shallow depth of field, warm suburban home exterior lighting, 4K render.

CHARACTERS: Woman — late 20s, beautiful face, large expressive eyes, dark hair, wearing a simple soft maternity dress. Heavily pregnant. Moving as fast as she possibly can. Pure panic energy. Man — same age, warm face, large expressive eyes, dark hair, wearing formal button-up shirt and trousers with a protective face mask covering his nose and mouth.

Absolutely terrified first-time father energy. Carrying two enormous overflowing clear plastic bags — stuffed completely with pillows, blankets, extra supplies, items spilling over the tops. Arms straining under the weight. Sweating.

ENVIRONMENT: Warm suburban home exterior. Front steps leading down to the driveway.

Warm beige walls, neat garden, morning light. MOOD: Absolute chaos. Complete first-time parent panic. Everything is an emergency. CAMERA: Wide-to-medium shot panning rapidly to match frantic movement. Slightly unstable handheld feel mimicking high stress energy.

ACTION: The front door BURSTS open. The man rushes out first, grunting under the weight of the overflowing bags, panting heavily. He scrambles down the front steps at maximum speed, stumbles slightly on the second step, but catches himself. The heavily pregnant woman appears in the doorway behind him, face full of controlled panic. She hurries down the steps, holding her belly. The camera tracks them moving frantically toward the car. The man falls behind, struggling with the weight, sweat visible above his mask. Pure chaos, frantic footsteps, smooth cloth and bag physics with items shifting inside. No glitches.

PROMPT – SCENE 2: The Calm (10 Seconds)

High-end Pixar-style 3D animation.

CHARACTERS: Exact same Man and Woman. Woman is wearing comfortable casual maternity wear — soft loose top and maternity leggings. Heavily pregnant again. Calm and relaxed energy. Man is wearing simple everyday casual clothes — plain t-shirt and jeans. No face mask. Relaxed confident energy. Carrying one sensible normal-sized duffel bag over one shoulder and a baby car seat in the other hand.

ENVIRONMENT: Exact same warm suburban home exterior, front steps, and driveway. Now a grandmother is visible in the background near the door holding a small toddler (their first child).

Warm morning light. MOOD: Experienced realism. Calm routine. They have done this before and survived. CAMERA: Steady static camera slowly panning to track their relaxed even-paced walk. Grounded and realistic feeling.

ACTION: The front door opens calmly. The man steps out, completely relaxed, holding the door for the woman. They walk side-by-side down the steps at a comfortable, steady pace. In the background near the doorway, the grandmother holding their toddler waves goodbye. The parents turn, smile, and wave back casually. The man gives a relaxed thumbs up, and the woman blows a quick kiss. They smoothly turn back and continue walking toward the car. Total ease, smooth motion, cloth physics, no glitches.

VIDEO 3: The "Emotional Storytelling" Framework

Emotion drives shares. This video is designed to make the viewer feel deeply by showing acts of service and love. Here is **The Unexpected Dinner**. *(Note: I have combined the 3-part*

sequence into 2 powerful 10-second scenes for a flawless editing workflow).

PROMPT – SCENE 1: The Exhausted Arrival (10 Seconds)

High-end Pixar-style 3D animation. Cinematic lighting, ultra-expressive facial acting, polished glossy materials, warm golden apartment lighting, 4K render.

CHARACTERS: Woman — late 20s, beautiful face, large expressive eyes, hair slightly escaping its bun, wearing a sharp clean work suit now carrying the weight of exhaustion. Completely drained energy. Man — same age, warm kind face, large expressive eyes, wearing casual home t-shirt and sweatpants. High energy, focused, taking care of everything.

ENVIRONMENT: Modern warm apartment. Front door opening into a clean tidy living room.

Kitchen visible from the entrance with warm under-cabinet lighting. Bedroom with soft lamp light.

MOOD: Exhaustion meeting unexpected order and care.

ACTION: The apartment door opens slowly. The woman steps inside, her work suit clean but her posture carrying every hour of the day. Her shoulders are dropped in pure exhaustion. She stops, eyes scanning the apartment slowly. Everything is perfectly clean and tidy. In the kitchen, her husband is at the sink washing dishes with comedic cartoon speed—water splashing, plates disappearing into the rack faster than possible, entirely focused. She watches him for exactly one second, then walks straight to the bedroom. She reaches the bed and falls forward onto it face-first in a full cartoon drop. Instant sleep. Smooth motion, cartoon speed effect on dishwashing, cloth physics, no glitches.

PROMPT – SCENE 2: The Grateful Surprise (10 Seconds)

High-end Pixar-style 3D animation. Same characters. Same warm apartment. Lighting at its absolute warmest and most golden. Candle glow mixing with soft lamp light.

MOOD: Pure overwhelming gratitude. Love so loud it becomes tears.

ACTION: The husband gently helps the half-asleep woman up from the bed, holding her hand. They walk together slowly toward the dining room. They stop at the doorway. Her eyes land on the dining table—it is completely set with lit glowing candles and a beautifully plated meal steaming in the center. She steps forward, taking it all in. Her bottom lip trembles, and tears escape. She covers her mouth with both hands, her shoulders shaking in a full emotional breakdown of gratitude. She turns and wraps both arms around him tightly, face pressed into his chest. He wraps his arms around her fully, his chin resting on her head in pure peace. She pulls back, wipes her tears, and smiles the biggest smile. They sit at the table, she takes a bite, closes her eyes in bliss, and they both laugh warmly together. Smooth motion, candle flame effect, steam vapor from food, tear particle effect, cloth physics, no glitches.

Final Step: Stitch and Edit

1. Import your two 10-second clips into your favorite editing app (CapCut, InShot, or VN Editor).
2. Trim any slight pauses at the beginning or end of the clips so the transition between Scene 1 and Scene 2 is completely smooth.
3. Add a trending audio track, matching the mood of the video (chaotic for panic scenes, soft and emotional for the final video).
4. Add auto-captions, export, and your viral reel is ready to post!

Let's Grow Together!

Building an audience from scratch is tough. I remember spending hours making content that got zero views. That's exactly why I built this workflow to help you skip the frustration and start seeing real growth today.

I want to see what you create with these prompts! When you post your first AI animation Reel:

Tag me @passiveincome.her in the caption or video.

I will jump into your comments to hype you up, and I regularly share my favorite follower videos to my own stories!
